

REMARKS

Claims 28-29, 31-38 and 40-51 remain in the present application. Claims 30 and 39 are cancelled herein. Claims 28 and 37 are amended herein.

Applicants respectfully submit that no new matter has been added as a result of the claim amendments. Applicants respectfully request further examination and reconsideration of the rejections.

Claim Rejections – 35 U.S.C. §102

Claims 28-29, 32-33, 35, 37-38, 41-42, 44 and 46-48 are rejected in the present Office Action under 35 U.S.C. §102(b) as being anticipated by United States Patent Number 3,805,247 to Zucker et al. (referred to herein as “Zucker”).

Applicants respectfully submit that the embodiments of the present invention as recited in Claims 28-29, 32-33, 35, 37-38, 41-42, 44 and 46-48 are neither anticipated nor rendered obvious by Zucker for the following reasons.

Applicants respectfully direct the Examiner to independent Claim 28, which recites a system comprising (emphasis added):

a plurality of memory resources;
a plurality of peripheral resources;
a plurality of processors;

a memory controller coupled to said plurality of processors and said plurality of memory resources, wherein said memory controller comprises a first resource controller for controlling access of said plurality of processors to said plurality of memory resources, wherein said first resource controller is further operable to implement a first bus for enabling first communication between a first processor of said plurality of processors and a first memory resource of said plurality of memory resources, wherein said first resource controller is further operable to implement a second bus for enabling second communication between a second processor of said plurality of processors and a second memory resource of said plurality of memory resources, wherein said first resource

controller is further operable to implement said first and second buses for enabling said first communication to occur independently of said second communication, and wherein said first communication occurs simultaneously with said second communication; and

a peripheral controller coupled to said plurality of processors and said plurality of peripheral resources, wherein said peripheral controller comprises a second resource controller for controlling access of said plurality of processors to said plurality of peripheral resources, and wherein said first resource controller is further operable to implement respective buses for coupling said plurality of processors to said plurality of peripheral resources.

Independent Claims 37 and 46 recite elements similar to independent Claim 28.

Claims 29, 32-33, 35, 38, 41-42, 44 and 47-48 depend from their respective independent Claims and recite further elements of the claimed invention.

Applicants respectfully submit that Zucker fails to teach or suggest the elements of “wherein said first communication occurs simultaneously with said second communication” as recited in independent Claim 28. As described in the present application, a first resource controller is operable to implement a first bus for enabling first communication between a first processor and a first memory resource. The first resource controller is further operable to implement a second bus for enabling second communication between a second processor and a second memory resource. The first communication occurs simultaneously with the second communication.

Page 6 of the rejection states that “Zucker however does not expressly state that simultaneous access to different memories is performed.” Accordingly, Applicants reiterate that Zucker fails to teach or suggest the elements of “wherein

“said first communication occurs simultaneously with said second communication” as recited in independent Claim 28.

For these reasons, Applicants respectfully submit that independent Claim 28 is neither anticipated nor rendered obvious by Zucker, thereby overcoming the 35 U.S.C. §102(b) rejection of record. Since independent Claims 37 and 46 recite limitations similar to those discussed above with respect to independent Claim 28, independent Claims 37 and 46 also overcome the 35 U.S.C. §102(b) rejection of record. Since dependent Claims 29-33, 35, 38-42, 44 and 47-50 recite further limitations to the invention claimed in their respective independent Claims, Applicants respectfully submit that Claims 29-33, 35, 38-42, 44 and 47-50 are also neither anticipated nor rendered obvious by Zucker. Therefore, Applicants respectfully submit that Claims 28-33, 35, 37-42, 44 and 46-50 are allowable.

Claim Rejections – 35 U.S.C. §103

Claims 30-31, 34, 39-40, 43 and 49-50

Claims 30-31, 34, 39-40, 43 and 49-50 are rejected in the present Office Action under 35 U.S.C. §103(a) as being unpatentable over Zucker in view of United States Patent Number 5,949,982 to Frankeney et al. (referred to herein as “Frankeney”). Claims 30 and 39 are cancelled herein, and thus, Applicants respectfully submit that a discussion of the 35 U.S.C. §102(b) of Claims 30 and 39 is moot. Applicants respectfully submit that the embodiments of the present

invention as recited in Claims 31, 34, 40, 43 and 49-50 are not rendered obvious by Zucker in view of Frankeny for the following reasons.

Applicants respectfully submit that Frankeny, either alone or in combination with Zucker, also fails to teach or suggest the elements of “wherein said first communication occurs simultaneously with said second communication” as recited in independent Claim 28, and similarly recited in independent Claims 37 and 46. In contrast to the claimed embodiments, Applicants understand Frankeny to teach bi-directional communication between a cross-bar switch and a device such that communications in each direction are sent simultaneously between the cross-bar switch and a device (Abstract; col. 3, lines 54-59). As such, Applicants respectfully submit that Frankeny teaches simultaneous communication between two components (e.g., the cross-bar switch and a device) instead of simultaneous communication between at least four components (e.g., a first processor and a first memory resource, a second processor and a second memory resource, etc.) as claimed.

Since dependent Claims 31, 34, 40, 43 and 49-50 recite further elements of the invention claimed in their respective independent Claims, Applicants respectfully submit that Claims 31, 34, 40, 43 and 49-50 are not rendered obvious by Zucker in view of Frankeny. Therefore, Applicants respectfully submit that Claims 31, 34, 40, 43 and 49-50 are allowable.

Claims 36, 45 and 51

Claims 36, 45 and 51 are rejected in the present Office Action under 35 U.S.C. §103(a) as being unpatentable over Zucker. Applicants respectfully submit that the embodiments of the present invention as recited in Claims 36, 45 and 51 are not rendered obvious by Zucker for the following reasons.

Page 7 of the rejection takes official notice of the elements of “wherein said plurality of memory resources, said plurality of peripheral resources, said plurality of processors, said memory controller, and said peripheral controller comprise components of a portable electronic device” as recited in Claim 36, and similarly recited in Claims 45 and 51. Applicants respectfully disagree with this assertion and direct the Examiner to MPEP §2144.03(E), which states that “[i]t is never appropriate to rely solely on common knowledge in the art without evidentiary support in the record as the principal evidence upon which a rejection was based.” Additionally, as stated in MPEP §2144.03(C): “[T]he Board [or examiner] must point to some concrete evidence in the record in support of these findings’ to satisfy the substantial evidence test. If the examiner is relying on personal knowledge to support the finding of what is known in the art, the examiner must provide an affidavit or declaration setting forth specific factual statements and explanation to support the finding.” Accordingly, Applicants respectfully invite the Examiner to provide documentary evidence in the next Office Action if the rejection is to be maintained (see MPEP §2144.03(C); see 37 CFR §1.104(c)(2)).

Furthermore, since dependent Claims 36, 45 and 51 recite further elements of the invention claimed in their respective independent Claims, Applicants respectfully submit that Claims 36, 45 and 51 are not rendered obvious by Zucker. Therefore, Applicants respectfully submit that Claims 36, 45 and 51 are allowable.

CONCLUSION

Applicants respectfully submit that Claims 28-29, 31-38 and 40-51 are in condition for allowance and Applicants earnestly solicit such action from the Examiner.

The Examiner is urged to contact Applicants' undersigned representative if the Examiner believes such action would expedite resolution of the present Application.
